

Task Document – Resume Screening & Candidate Ranking Web Application

Objective

Develop a full-stack web application that automates resume screening by comparing uploaded resumes against a Job Description (JD), assigning a matching score, and ranking candidates from highest to lowest fit.

The goal is to simplify the initial HR screening process and help identify the most relevant candidates quickly.

Scope

Build a web application with the following workflow:

Upload Resumes → Upload/Enter Job Description → Analyze → Generate Scores → Display Ranked Candidates

Features

1. Resume Upload

- Upload single or multiple resumes
 - Supported formats:
 - PDF
 - DOC
 - DOCX
 - Store uploaded resumes
-

2. Job Description Input

- Enter Job Description manually **or**

- Upload JD document
-

3. Resume Screening & Scoring

The system should:

- Extract relevant information from resumes
- Compare resumes against the Job Description
- Generate a **matching score (0–100)**
- Rank candidates from **highest score to lowest score**

Suggested comparison factors:

- Skills match
 - Experience relevance
 - Education alignment
 - Keyword similarity
-

4. Results Dashboard

Display:

- Candidate Name
- Resume Preview
- Match Score
- Rank
- Key Matching Skills
- Missing Skills (if any)

Additional features:

- Sort by score
 - Search candidates
 - Export results (CSV/Excel)
-

Technical Requirements

Frontend

- React / Next.js (preferred)
- Responsive UI

Backend

- Node.js / Express or FastAPI

Database

- PostgreSQL / MySQL

AI / Processing

- Use any suitable approach for:
 - Resume parsing
 - JD analysis
 - Candidate scoring

Deployment

Deploy the application on any cloud/platform.

Examples:

- Vercel
- Netlify
- Render
- AWS
- GCP

Deliverables

Submit:

1. **GitHub Repository Link**
 - Complete source code
 - README with setup instructions
2. **Deployed Application URL**
 - Publicly accessible
3. **Brief Documentation**
 - Architecture overview
 - Approach used for scoring candidates

- Assumptions (if any)
-

Expected Outcome

A working web application where users can upload resumes and a Job Description, and receive a ranked list of candidates based on suitability for the role.

Timeline

- The complete application should be developed and submitted within **2–3 days** from task assignment.
